

European Longevity Records - 2023-09-01

The table below lists longevity records recorded through European bird ringing.

The two oldest individuals of a species are included in the list and the minimum age for a recovery to be included is five years. Birds ringed as full-grown or adults have been included with a minimum age based on age at ringing (start of year set to 1st of July). Recoveries included have been verified by the responsible ringing scheme.

This longevity list should be cited as:
