

European Longevity Records - 2017-04-05

The table below lists longevity records recorded through European bird ringing.

The two oldest individuals of a species are included in the list and the minimum age for a recovery to be included is five years. Recoveries of birds in the list where ring number and details are not included are published in atlases by those schemes.

Birds ringed as full-grown or adults have been included with a minimum age based on age at ringing (start of year set to 1st of July).

This longevity list should be cited as:
